

Manufacturing Capabilities Overview

Seven plants across Nigeria and India. Five processes. One standard.

Injection

Blow

Rotational

Extrusion

Bottling

■ THE GROUP AT A GLANCE

Seven plants. One way of working.

Every SACVIN product comes off a line somewhere in Nigeria or India. What connects them is not the machinery. It is that the second batch matches the first.

SACVIN Group is a manufacturing and sourcing group. It started in Lagos in 1991 with four machines, and today sells on five continents.

Figures cover all seven plants across the group.

Made in two countries. Sold on five continents.

■ Manufacturing

■ Markets served: Africa, Asia, Europe, North America and South America

Five businesses. One standard.

Made for where it ends up. Heat, pressure, repetition, speed. Our plants are set up around the conditions our products meet after they leave, not the conditions they are made in.

Consumer Plastics

Kitchen storage, dining, kids' lunch and schoolware, laundry and bath, coolers and home utility. Sold through distributors, wholesalers and retail.

Rigid Packaging

Bottles, jars, food containers, jerry cans, pails, caps and closures for FMCG and industrial brands, including OEM and private label.

Pipes & Tanks

Plumbing and water distribution pipes, electrical conduit, overhead tanks and underground drainage, for dealers, contractors, homeowners and farms.

VeeGlow Closures

Lotion pumps, disc and flip-top caps, mist sprays, spouts, screw caps and tube closures for personal care, home care and pharmaceutical brands.

Aquarite

Bottled drinking water for households, offices and institutions. Right water. Right choice.

// **When systems are strong, products don't have to explain themselves.**

Five processes, each doing what it does best.

Between them, these processes cover everything from a cap weighing a few grams to a water tank that stands on a roof for years.

Injection Moulding

We make everything from caps that weigh a few grams to large storage boxes, including containers, lunch boxes, baskets and closures for homes and brands.

Blow Moulding

Brands fill our bottles, jerry cans and jars on their own lines, in sizes from small cosmetic bottles to large jerry cans. We also make coolers and water bottles for the home.

Rotational Moulding

Our water tanks are moulded in one piece, with no seams or welds and nothing to split in the sun.

Extrusion

Our pipes and electrical conduit come off automated lines in continuous lengths, so the last metre matches the first.

Bottling

At Aquarite, every bottle is blown, filled, capped, labelled and packed on one conveyor that runs straight into the warehouse. Nobody touches it between the machine and the pallet.

Automation where it counts

Automation takes the variation out of repetitive work. Finishes come out smoother, tolerances hold, and fewer rejects mean less material wasted. Where a line can run better, we change it.

Where it gets made.

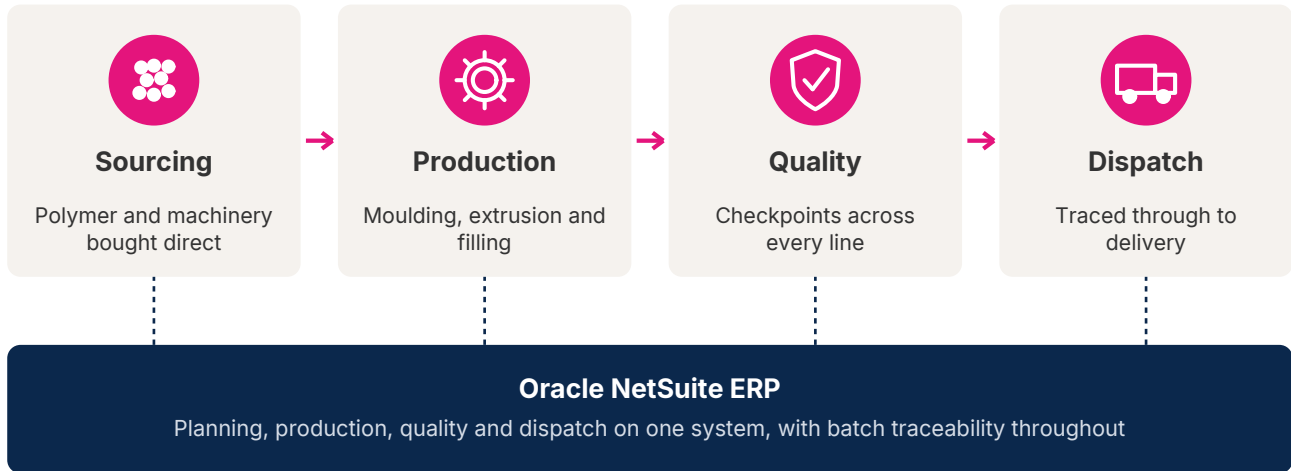

Seven plants across Nigeria and India, each set up around the processes it runs.

Plant	Role	Processes
Mowe, Ogun State, Nigeria	Flagship consumer and packaging plant	Injection and blow moulding
Challawa, Kano State, Nigeria	Consumer and packaging plant	Injection and blow moulding
Bompai, Kano State, Nigeria	Consumer and packaging plant	Injection and blow moulding
Oshodi, Lagos State, Nigeria	Flagship pipes plant	Extrusion
Challawa, Kano State, Nigeria	Pipes and tanks plant	Extrusion and rotational moulding
Ajao Estate, Lagos State, Nigeria	Aquarite water bottling plant	Automated bottling
Ahmedabad, India	VeeGlow caps and closures plant	Injection moulding

Consistency is a system, not a claim.

Every line, mould and machine is set to one outcome: products that come out the same, batch after batch, year after year. This is how.

ERP on Oracle NetSuite	Connects planning, production, quality and dispatch
Batch traceability	Across every product category
Production visibility	Real-time production and inventory control
Quality checkpoints	Integrated across lines and facilities

We know what goes in.

The group buys its own polymer and machinery direct from suppliers, so the grade of material is known before it reaches a machine. Incoming material is checked before it goes into production. Control starts before the first machine switches on.

Certified. Audited. Open to inspection.

Our quality claims are checked by people who don't work for us. Each standard is held by the company named against it.

SMETA ethical trade audits are shared through Sedex. Certificates, scopes and expiry dates available on request.

Tested beyond the line. Trusted beyond the factory.

Quality is a continuous discipline, not a final check.

Pipes and tanks	Pressure and UV testing
Packaging and closures	Dimensional and leak testing
Water	Hygiene and process controls on a closed, automated water line

Products are evaluated for real-world performance, not just compliance.

Innovation with a measurable outcome.

Innovation here means longer life, faster movement, better compatibility and fewer failures.

Materials

Material optimisation for durability and heat resistance.

Tooling

Tooling and mould upgrades for precision and repeatability.

Line speed

Packaging built for compatibility with FMCG partners' filling lines.

Design

Design efficiency for consumer products that move faster on shelves.

In practice

A range that keeps moving

New products join the consumer range every year, and each one is tracked once it reaches the market. What sells helps shape what we make next.

Skill. Discipline. Pride.

Machines do not run themselves. Engineers, technicians, quality inspectors and operations teams work to one standard: build it right, deliver it reliably.

Built to a brand's brief.

When a brand needs a product that doesn't exist yet, we develop the mould with them, from first drawing to production run.

Custom mould development

New containers and closures developed to your specification.

OEM and private label

Production under your brand, on our lines.

Branding flexibility

Colours and finishes matched to your identity.

Filling line compatibility

Packaging made to run on high-speed automated filling lines.

Working together

Every project is scoped individually. We agree the specification, the mould, the volumes and the commercial terms with you before production starts.

Industries we supply

Food and beverage, personal care and cosmetics, pharmaceuticals, home care, paints, lubricants, ice cream, chemicals, construction, plumbing and electrical.

■ TALK TO US

Can we make it for you?

Send us the specification and the volume, and the right team will come back to you.
